

Bitcoin & Blockchain: Experts talk about a megatrend, the biggest invention since the internet exists. The Bitcoin blockchain, independent of banks and governments, is the first, largest and most secure blockchain in the world. Bitcoin, limited to 21 million units, has the potential to become the gold of the digital age.

Bitcoin Mining: Anyone who provides computing power to run the Bitcoin blockchain is rewarded with Bitcoins. In this way, instead of speculating on unpredictable and volatile price movements, it is possible to produce Bitcoins simply and conveniently yourself. Day by day, piece by piece.

smart IT Strategie: Experience shows that new markets and technologies harbor the greatest opportunities, but also the greatest risks. To offer our customers maximum security, flexibility and freedom, our Bitcoin strategies combine immediately available Bitcoins with Bitcoin mining that is particularly rewarding in the long term. The strategies are rounded off by cost average effects thanks to daily hosting bonus payments in the first 60 months as well as the option of a subscription (can be cancelled and paused at any time, starting at 55 euros). The bitcoins produced for the customers are credited to them every day after deduction of the defined costs (since March 20, 2019) - 7 days a week, 365 days a year.

**"Our mission: to generate significantly more Bitcoins for our customers, than they could have bought with the same amount!"**

Compact / Compact Turbo: Our classic product with the most balanced risk/reward ratio in the long term.
