

Bitcoin & Blockchain: Experts talk about a megatrend, the biggest invention since the internet exists. The Bitcoin blockchain, independent of banks and governments, is the first, largest and most secure blockchain in the world. Bitcoin, limited to 21 million units, has the potential to become the gold of the digital age.

Bitcoin Mining: Anyone who provides computing power to run the Bitcoin blockchain is rewarded with Bitcoins. In this way, instead of speculating on unpredictable and volatile price movements, it is possible to produce Bitcoins simply and conveniently yourself. Day by day, piece by piece.

"Our mission: to generate significantly more Bitcoins for our customers, than they could have bought with the same amount!"

The bitcoins produced for the customers are credited to them every day after deduction of the defined costs (since March 20, 2019) - 7 days a week, 365 days a year.

smart IT Sprinter offers a unique chance to participate in other Blockchains as a great addition to our classic Bitcoin Mining, diversifying your portfolio. Sprinter focuses especially on Liquidity Mining and Staking (Proof of Stake). Extraordinary in this area: smart IT pays all of these results directly in Bitcoin!

What is Proof of Stake (POS)?

Proof of Stake is another Blockchain consensus model that is, other than the Bitcoin Blockchain (=Proof of Work), not based on computing power, but the deposit of certain Coins or Tokens.

That means: For Proof of Stake, not the Hash Rate determines which user is generating the next block and gets the block reward. It is the stake of every user (number of deposited Coins/Token) that affects the chance to generate the next block in the blockchain.

Simply put: Everyone being willing to lend a certain amount of Coins/Token to the respective network/Blockchain, increases the own chance for the block reward according to the amount of Coins/Token that are provided by this user. (In the case of Bitcoin Mining, users are not increasing the chance by lending coins, but by providing computing power)

Similar to Bitcoin Mining, in the Staking area it definitely makes sense to join bigger platforms in order to generate regular and reliable results.

What is Liquidity Mining?

Another important component of Sprinter is „Liquidity Mining“.

Liquidity Mining takes place in decentralized Exchanges (=DEX) and is an additional method to generate additional income by providing liquidity to a DEX, supporting it to run their operation.

Doing so, users will receive so called „Rewards“ from the platform they are supporting by just depositing certain coins or trading pairs.

Simply put: Anyone that supports decentralized Exchanges by providing liquidity (in form of certain crypto currencies) will be rewarded for that.

Being able to cleverly compare these rewards and trading pairs on different platforms and having the means to provide a certain amount of liquidity, can result in a great passive income, letting the crypto currencies work for you!

Sprinter: Goal, Costs, Duration

Our goal is to generate a Sprinter result (= Sprinter Bonus) of about 0,8% to 1,6% per month (9,6% - 19,2% per year) within the durance of 3 years. These results will be changed into Bitcoin and distributed to Sprinter costumers once a week.

With Sprinter, there will never be additional costs for smart IT users raised by smart IT. Sprinter will run for 36 months. After that time the purchase price will be fully paid to the users smart IT account in BTC.
